Certification

Cisco certifications take you where you want to go

Whether you have years of IT experience or are just starting your journey in the field, getting certified is a great way to boost your career. Certifications are proof of knowledge, aptitude, and a lifelong learning mentality, and hiring managers trust certified employees to connect, secure and automate Cisco networks across the globe.

Cisco Learning Credits

Make Cisco Learning Credits work for you

What are CLCs

Cisco Learning Credits (CLCs) are prepaid vouchers you can use to plan and pay for Cisco training and exams. They're an ideal way to allocate training dollars toward immediate and long-term training goals.

NOTE: CLCs are valid for 12 months from the date of purchase. Training must be booked and completed prior to expiry. **1 CLC = 100 USD**

Fast Lane can redeem your CLCs for purchase on all official Cisco public, privately delivered courses, and Cisco U. subscriptions/courses.

Contact your Fast Lane Account Manager to help you develop your training plans and strategies. You can use CLCs for nearly all your Cisco training needs.

Workshops - POC & Partner

What are POC Workshops ?

Immersive, hands-on workshops that provide a deep dive into the practical skills of implementing, monitoring, and troubleshooting key technologies and products. Developed exclusively by Fast Lane.

Based on real-world scenarios but implemented in a robust lab environment, attendees will work through a best-practice lab guide to build a working solution while being coached by a senior Fast Lane Subject Matter Expert (SME). Once the solution is complete and working, the SME will connect to the attendee pod and load a troubleshooting ticket, providing practical, real-life challenges for the attendees to fix.

Currently Available

Audience: Technical Team(s)

DNAC POC

This 3-day POC workshop takes you through a network assessment followed by implementation and troubleshooting of Cisco DNA Center with Wireless LAN Controllers (WLC) in HA, AP's, sensors, wired devices, and ISE. Including automation and Assurance.

9800 POC

This 3-day POC workshop covers the implementation and troubleshooting of the Cisco 9800 Wireless Controller. Covering topics including WLAN, policy and tag configuration, QoS, High Availability, Software updates, integration with ISE, FlexConnect, Clean Air, and rogue detection before moving onto real-world troubleshooting challenges.

ISE POC

This 3-day ISE configuring, monitoring, optimizing and troubleshooting workshop provides those who manage and maintain ISE with the knowledge and skills to monitor, tune and optimise ISE. Covering topics including AD integration, policies, monitoring and troubleshooting tools, High Availability, reporting and backup.

Meraki POC

This 3-day Meraki POC workshop covers the implementation and troubleshooting of Meraki devices through the Cloud Managed Meraki Dashboard. Covering topics to help build a secure network solution for the workplace for both clients and IoT devices, including building a LAN network using Meraki switches and extending the LAN with Meraki wireless Access Points, including integrating into Cisco ISE, adding cameras and sensors for IoT devices, integrating a WAN solution with MX to include SD-WAN, before moving onto real-world troubleshooting challenges.
